Auto Battery - User Guide

On Receipt of your new battery please fully charge up the battery prior to use. The very best way to charge your cybercig battery is with a Cybercig Wall Charger and Cybercig USB/ cable. (Both these items are available from the Cybercig web site accessories page).

Assuming that you have both items noted above please follow these simple steps.

Screw the battery clockwise in to the USB adapter (please do not over tighten the battery in to the USB)

Plug the USB Adapter in to the USB port located in the underside of your wall charger.

Plug your wall charger in to a UK standard 3 pin wall socket and turn on the power.

The USB LED light will illuminate either red or green, when the light illuminates Red the battery is charging; when the USB light illuminates Green the battery is fully charged. The charging process should take no more than one and a half to two hours to complete.

Caution: Do not leave the wall charger switched on overnight; charge your battery during the day and un- plug the wall charger as soon as the re-charging process is completed.

Caution: Keep all electrical devices in a safe dry place and out of the reach of children.

When the re-charging cycle is completed, Turn off the power on your wall socket and unscrew the battery from the USB adaptor.

Connect the battery to your E Cigarette tank.

Once the tank is correctly fitted to your Auto Battery Simply in- hale on the tank mouthpiece and the battery will automatically work.(Please ensure that you have e liquid in your tank prior to taking an inhalation).

The warning lights on the battery in either Blue or Red signify the following;

Under normal use the blue or red light located at the bottom end of the battery will illuminate as you inhale on the tank mouthpiece.

If the Blue or red light flash on and off repeatedly during normal use then the battery requires charging.

Specification

Battery name: 650 Automatic E Cigarette / E-shisha Battery

Power: 650mAh

Size: Length 86.4mm

Diameter 14mm

Operating Voltage: 3.7v

Weight: 30g

Fully charged the automatic battery provides approx. 600 inhalations (approximately 2 days)

Charge Time: 1.5-2 hours

Lifespan: 250 to 300 charge cycles

Battery construction: Lithium Ion

Colour Options: Black and stainless

Warranty: 1 month from date of purchase

LED colour: Red or Blue (as provided the colour is not an option of choice)

Spare & replacement tanks can be purchased from our website:
